empty message

Exercise04_17.java

(Days of a month) Write a program that prompts the user to enter the year and the first three letters of a month name (with the first letter in uppercase) and displays the number of days in the month. If the input for month is incorrect, display a message as presented in the following sample runs:

```
Enter a year: 2001 [Enter]
Enter a month (first three letters with the first letter in uppercase): Jan [Enter]
Jan 2001 has 31 days
```

```
Enter a year: 2016 [Enter]
Enter a month (first three letters with the first letter in uppercase): jan [Enter]
jan is not a correct month name
```

Exercise04_20.java

(Process a string) Write a program that prompts the user to enter a string and displays its length and its last character.

Here are two sample runs:

```
Enter a string: Hello, this is a test. [Enter]
The length of the string is 22
The first character in the string is H
```

Exercise04_21.java

(Check SSN) Write a program that prompts the user to enter a Social Security number in the format DDD-DD-DDDD, where D is a digit. Your program should check whether the input is valid. Here are sample runs:

```
Enter a SSN: 123-45-678 [Enter]
123-45-678 is an invalid social security number
```

```
Enter a SSN: 123-45-56x [Enter]
123-45-56x is an invalid social security number
```

Exercise04_22.java

(Check substring) Write a program that prompts the user to enter two strings, and reports whether the second string is a substring of the first string.

```
Enter string s1: HelloHello [Enter]
Enter string s2: Hell [Enter]
Hell is a substring of HelloHello
```

Exercise05_04.java

(Conversion from inch to centimeter) Write a program that displays the following table (note that 1 inch is 2.54 centimeters):

Inches	Centimetres
1	2.54
2	5.08
3	7.62
4	10.16
5	12.7
6	15.24
7	17.78
8	20.32
9	22.86
10	25.4

Exercise05_05.java

Write a program that displays the following two tables side by side: (note that 1 inch is 2.54 centimeters):

Inches	Centimetres
1	2.540
2	5.080
3	7.620
4	10.160
5	12.700
6	15.240
7	17.780
8	20.320
9	22.860
10	25.400

Centimetres	Inches
5	1.969
10	3.937
15	5.906
20	7.874
25	9.843
30	11.811
35	13.780
40	15.748
45	17.717
50	19.685

Exercise05_08.java

(Find the highest score) Write a program that prompts the user to enter the number of students and each student's name and score, and finally displays the name of the student with the highest score. Use the next() method in the Scanner class to read a name, rather than using the nextLine() method.

```
Enter the number of students: 3 [Enter]
Enter a student name: Lee [Enter]
Enter a student score: 80 [Enter]
Enter a student name: David [Enter]
Enter a student score: 71.5 [Enter]
Enter a student name: Jack [Enter]
Enter a student score: 76 [Enter]
Top student Lee's score is 80.0
```
