Exercise12_02.java

(ArrayIndexOutOfBoundsException) Using the array shown below, write a program that prompts the user to enter an integer between 1 and 12 and then displays the month corresponding to the integer entered. Your program should display “wrong number” if the user enters a wrong number by catching ArrayIndexOutOfBoundsException.

```
String[] months = {"January", "February", "March", "April", "May",  
"June", "July", "August", "September", "October", "November", "December"};
```

Here are sample runs

```
Enter an integer between 1 and 12: 1  
The month is January
```

```
Enter an integer between 1 and 12: 30  
wrong number
```

TriangleWithException.java

(IllegalTriangleException) In a triangle, the sum of any two sides is greater than the other side. The Triangle class must adhere to this rule. Create a IllegalTriangleException class so that the following TriangleWithException class could work

```
public class TriangleWithException {
    TriangleWithException(double a, double b, double c) throws IllegalTriangleException{
        String msg = "The sum of any two sides should be greater than the other side";
        if(a+b<=c||a+c<=b||b+c<=a) {
            throw new IllegalTriangleException(a,b,c,msg);
        }
    }

    public static void main(String[] args) {
        try {
            TriangleWithException t = new TriangleWithException(1,2,3);
        } catch (IllegalTriangleException e) {
            System.out.println("Error: "+e.getMessage());
        }
    }
}
```

TriangleWithException.java

A typical output of the TriangleWithException is

```
Error: The sum of any two sides should be greater than the other side
```

Exercise12_23.java

(Process scores in a text file on the Web) Suppose the text file on the Web <http://liveexample.pearsoncmg.com/data/Scores.txt> contains an unspecified number of scores separated by spaces. Write a method that reads the scores from the file and compute the average.

```
public static double computeAverage(URL url) throws Exception
```

A typical Scores.txt is shown below

```
34 34.9 54.5 14 32 24  
31 34 53 74 22 29  
4 34 14 14 32 24 31 34.1 53.2 74.0  
22 29
```
